

## Network of Partners

**An active, versatile, international cooperation with partners from different businesses is the key to success. Occasionally, we are at the same time both a supplier and a customer to our partners.**

### Versatility

**W**e do not try to do everything ourselves, nor to focus only to a narrow business area. It is both for our own and our customers' benefit that we simultaneously design different kind of products. In that way we guarantee our customers a continuous flow of new ideas.

### Technology trends

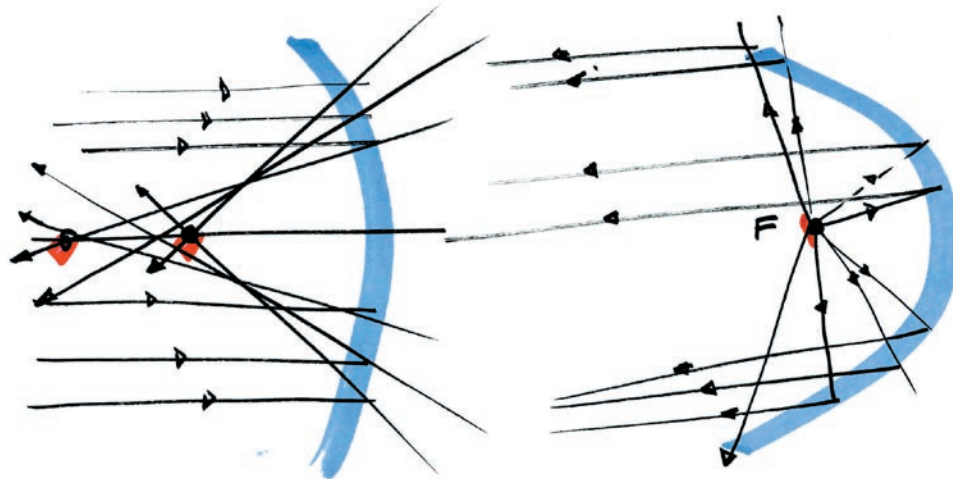

**W**e develop our core competence according to long-term technology trends. We actively follow development of materials, tooling and machining, production technology, light sources and electronics. In these areas we try to transfer the new technology as soon as it is economically and qualitatively feasible.

### Networking

**W**e feel we have succeeded, when we can offer our customers the benefits our own core competence combined with our partners' core competence. No single company, not even a big one, can offer a total solution that is excellent in every detail working on its own only. Every company needs good partners. The customer sees the benefits of networking through accelerated development, when a product is brought into production without problems.

## New partners

We continuously search for new technology partners among companies, research institutes and universities. Most of our present partners are global technology leaders in their own field of expertise. We see the partnership as a development platform for both parties, where mutual benefit is guaranteed. Please feel free to contact us, if you feel the partnership with us to be interesting.
